Python & Django Assignment

Create APIs for a Blogging application with following features:

- An author can create blogs and publish it live to the community
- Users should be able to post comments on the blogs
- Users should be able to Upvote/Downvote the blogs

Implement following functionalities for the app:

- The APIs should be protected by using any popular authentication framework like OAuth 2.0. Only registered users should be able to interact with the app.
- Create APIs for
    - User/Author registration
    - Posting comments on the blog
    - Upvote/Downvote the blogs
    - Author should be able to Remove/Hide the blogs from users
- Send emails (using Gmail's SMTP server):
    - When a user registers
    - When a user makes a comment on the blog then notify the Author
- Save the information in any open source DB

Once the assignment is complete push the code to GitHub/Gitlab/Bitbucket and share the repository details
